## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 30 June 2005 has been entered.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-6 and 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Min (USPN 5,072,134).

With respect to claims 1-6, Min discloses, in Figs. 2 and 3, a circuit comprising: “a first phase internal voltage generator (20)”; and “a second phase internal generator (10)” having “a voltage pump” (3)”, “an input gate voltage generator (7’, see Fig. 4)” and “a power output circuit (M9)”, all connected and operating similarly as recited by Applicant.

With respect to claims 8-10, clearly the above circuit to Min will provide the recited method.

Claims 1 and 7 are rejected under 35 U.S.C. 102(e) as being anticipated by Yabe (USPN 6,661,279). Yabe discloses, in Fig. 5, “a first phase internal voltage generator (50)” having “a comparator (61)”, “a power transistor (55)”, “a first resistor (57)” and “a second resistor (58)”; and “a second phase internal generator (51)”, all connected and operating similarly as recited by Applicant.

Examiner has fully considered Applicant’s remarks for the above rejection and has not found them to be persuasive. Applicant again argues concerning the language regarding the “second internal voltage” being steadied. It is clear that Applicant is giving too narrow an interpretation of this language. One skilled in the art is well aware that the broadest reasonable language should be given to claim language. Clearly, the voltage at VOUT of the circuit of Min and VDDint of the circuit to Yabe is transitioning toward the steady state voltage. Thus, it would be more than reasonable to conclude that the “second internal voltage” of these circuits is being “steadied”.
